

1. **THE LIFE OF A BIRD**  
 The life of a bird is a long and hard one. It starts with a single egg, which is laid by the mother bird. The egg is protected by a shell, and the bird inside is very small and helpless. It needs to be cared for by its parents until it is able to fly and take care of itself.

2. **THE LIFE OF A FISH**  
 The life of a fish is also a long and hard one. It starts with a single egg, which is laid by the mother fish. The egg is protected by a shell, and the fish inside is very small and helpless. It needs to be cared for by its parents until it is able to swim and take care of itself.

3. **THE LIFE OF A PLANT**  
 The life of a plant is a long and hard one. It starts with a single seed, which is planted in the soil. The seed needs to be watered and cared for until it is able to grow and take care of itself.

4. **THE LIFE OF A HUMAN**  
 The life of a human is a long and hard one. It starts with a single cell, which is fertilized by another cell. The cell grows and divides, and eventually becomes a baby. The baby needs to be cared for by its parents until it is able to walk and take care of itself.

5. **THE LIFE OF A BIRD**  
 The life of a bird is a long and hard one. It starts with a single egg, which is laid by the mother bird. The egg is protected by a shell, and the bird inside is very small and helpless. It needs to be cared for by its parents until it is able to fly and take care of itself.
